Warranty

Warranty Information for your Launch Pad Quilting Frame

The Launch Pad Quilting Frame has a One-Year limited warranty on all parts. The Grace Company will repair or replace, at its discretion, any part with problems due to our manufacturing, or defects in materials. This warranty does not cover parts damaged through misuse, improper storage, improper assembly, loss, natural events, and willful destruction. Parts must be returned to the Grace Company, shipping prepaid, before we can repair or replace them. We will promptly return the repaired/replaced part at our expense if done within a year of the purchase date.

Leg Height Adjustment Chart

Height of Fabric Surface			
Top Hole	42"	3rd Hole	38"
6th Hole	41"	2nd Hole	37"
5th Hole	40"	Bottom Hole	36"
4th Hole	39"		

The Height Adjustable Legs will come pre-installed.

Setting the frame height so that the fabric surface is at about elbow height is a good general starting point.

Adjust the height from there based on what is most comfortable for you.

Leader Cloth

21

Section 2-1: High thread count fabric such as Muslin is recommended for Leader Cloth material.

Section 2-2: Cut your Leader Cloth fabric to the match that of the Leader Cloth Diagram and the width 6 inches shorter than your rail length. Surge or hem all edges.

Section 2-3: Pin the Leader Cloths to the appropriate sections of the quilt. (Fig. 1-2)

Leader Cloth Example

Fig. 1-2

Fabric Attachment

22

Section 3-1: Tape the leaders to the rails and pin the fabric to the leaders. The batting will drape down near the floor.

Note: There is a Batting rail option available for purchase.

22 Continued.

B

Support Assembly Adjustment

23

Section 4-1: Adjust the Support Assemblies by loosening the knobs and moving the assembly up or down as necessary to fit the batting in the throat of the machine.

Section 4-2: Adjust *INS-LP003 and *INS-LP005 such that the fabric lays flat in the throat of the machine as the take up rail roll gets larger.

Section 4-3: It will be necessary to adjust *INS-LP004 and *INS-LP006 such that the fabric lays parallel to the table top.

Troubleshooting and Tips

Quilting Tips:

- Be Careful not to sew too close to the edge, to prevent hitting your Bungee Clamps, or running off the edge of the quilt. Also, if you are using side leaders, avoid accidentally stitching the leader to your quilt.
- If your quilt will fit onto your frame length-wise attach your quilt's fabric to the rails along it's length. You will have to roll the quilt less often, since your work surface will be as large as possible. Also, the quilt will not be as large under the arm of the machine when you get to the end.
- Make sure to turn off your sewing machine any time you leave your quilting room.

Rails:

- Keeping the fabric on the Take-Up Rail, just slightly above the bed of the sewing machine, yields the best results. If the fabric is too high off the bed, thread and needle breakage may occur. If it is pressing down on the bed of the machine it will be difficult to roll the sewing machine on the frame.
- When rolling the quilt, pull the batting a little to each side to make sure that it is not bunching. After rolling and tightening all the rails, check under the quilt to see that the back is smooth.

Stitch Regulating:

- If the machine only appears to be stitch regulating in one direction, make sure the encoder cords are plugged in tightly on both ends. Make sure the encoder O-rings are contacting the track and rolling when the machine is moving on the carriage.

Bungee Clamps:

- If it is necessary to use the bungee clamps over the batting on your quilt, turn the bungee clamps upside down so the rubber grip in the clamp is gripping against the bottom fabric instead of the batting. Having the rubber grip clamp against the batting is less effective than having it clamp against the fabric.

Fabric Issues:

- Do not over tighten the fabric on the quilting frame. Stretching the fabric will result in a quilt that does lay flat when it is finished.

Frame Cleaning:

- Regularly clean the wheels and track of your carriage and frame. Lint from the batting will build up quickly causing the carriage not to roll as smoothly and eventually damage the track.
